

MobileFrontier: enhance loyalty, drive revenue and provide a platform for future services

With extensive experience developing applications for the enterprise, Rococo Software introduces voice applications that provide corporate customers with sophisticated voice services.

Using Rococo's value-add voice applications, businesses can integrate advanced voice services directly with their enterprise systems, enabling business customers to use the Internet to control, manage and utilise voice services. Rococo's voice applications work with standard APIs such as OSA/Parlay and SIP.

Scheduled Conference Call

Scheduled Conference Call enables subscribers to easily schedule conference calls, select participants and change or cancel conference calls directly from **Microsoft Outlook** and **Lotus Notes**.

This easy-to-use software application is suitable for SMEs and large enterprises and helps to increase conference call service usage by simplifying conference call procedures.

- Native integration lets users schedule conference calls from within Microsoft Outlook and Lotus Notes
- "Conference" button appears on Microsoft Outlook toolbar
- Built on Microsoft, Parlay and SIP standards
- Operators can brand the service as their own

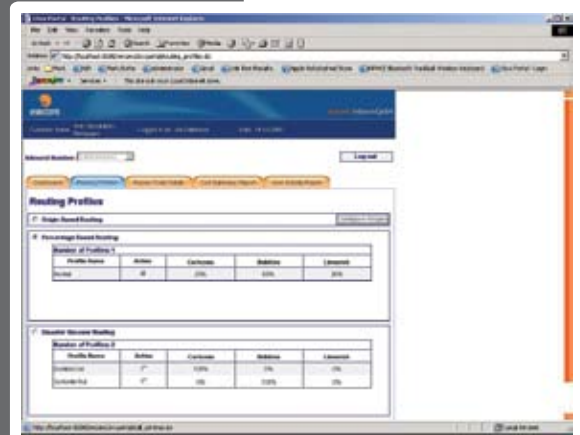

C3 – Call Centre Control

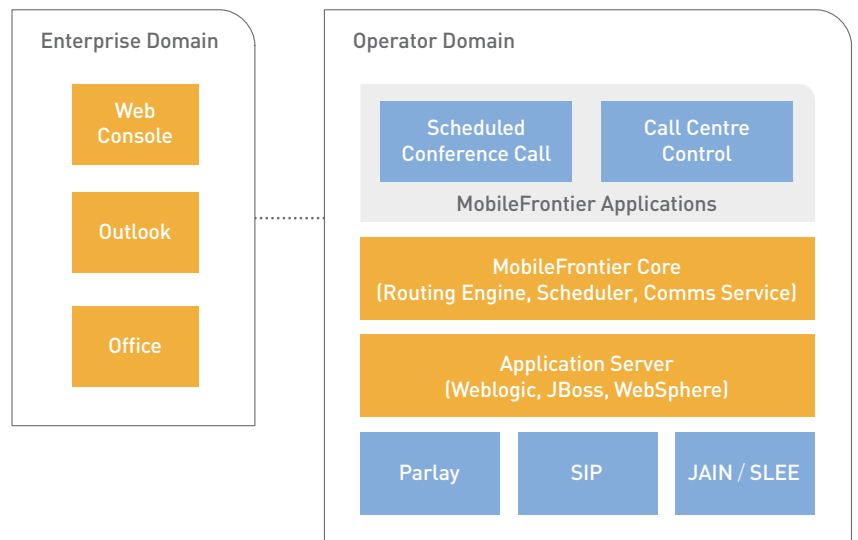

C3 provides call centres with self-service control over inbound **1800/freephone voice traffic**. The C3 web interface offers a variety of routing options including percentage-based call routing, origin-based call routing, divert on busy, divert on no answer and disaster recovery scenarios.

Using C3, corporate customers can immediately self-administer key services, reducing wait times that occur when call centres rely on telecom operators to modify and re-configure system settings.

- Routing options for call centre customers include:
 - ... Percentage-based routing over multiple call centre sites
 - ... Time of day, time of month
 - ... Origin-based routing
 - ... Divert on busy, divert on no answer
 - ... Switchable Disaster Recovery scenarios
- Personalised web portal provides secure control over inbound traffic management
- “Sticky” integration with corporate customers
- Native integration with corporate CRM systems
- Operators can brand the service as their own

How MobileFrontier Works:

ROCOCO™ software

With a solid reputation for developing enterprise applications, Rococo Software creates innovative, sophisticated applications for telecom operators looking to deliver value-add applications to corporate customers. Rococo works with fixed and mobile operators to build compelling new voice services that enhance loyalty, drive revenue and provide a platform for future services. A creator of innovative solutions in the telecoms industry, Rococo customers include Nokia, Sony Ericsson, Aplix and Esmertec. Rococo has shipped applications on handsets since 2004.
